

## Box support

Box support for concrete elements

**Type:** AS101

**Product ID:** 2TKA00004251

**GTIN:** 6438199008257

Box support AS101 is used at concrete element factories with casting tables when installing mounting or junction boxes into upper side of the element. The support is assembled from two AS101 plastic parts: the other is fixed to the casting table with threaded bushing magnet ("vemo magnet", for example D60/65 H10, M16) and the other is equipped with the box (compatible with most boxes in the market). The plastic parts are then connected to each other's with two rebars  $\varnothing 10\text{mm}$  or  $\varnothing 8\text{mm}$ . The length of the rebars is dependent on the thickness of the element and the box used (separate chart for dimensioning). Made of 100% recycled plastic (post-consumer plastic waste) and halogen free material (IEC/61249-2-21).

## Technical specification

### Thermal conditions

Operating temperature: -15 ... 60 °C

### Packing

Package: 60

Unit: PCS

### ETIM Data

ETIM Version: ETIM-9.0

# Product Card

Box support for concrete elements

ETIM Class:	EC002328
Type of accessory/spare part:	Other
Accessory:	Yes
Spare part:	No
Suitable for built-in installation box:	Yes
Suitable for central conduit box:	No
